Linear algebra moves steadily to n vectors in m -dimensional space. We still want combinations of
the columns (in the column space). We still get m equations to produce b (one for each row). Those
equations may or may not have a solution. They always have a least-squares solution. The interplay
of columns and rows is the heart of linear algebra.

Linear Algebra and Its Applications (Fourth Edition)

Solutionsto Exercises 15 32 A is singular when its third column w is a combination $cu + dv$ of the
first columns. A typical column picture has b outside the plane of u, v, w . A typical row picture has
the intersection line of two planes parallel to the third plane.
