Analysis of data ordered by the time the data were collected (usually spaced at equal intervals), called a time series. Common examples of a time series are daily temperature measurements, monthly sales, and yearly population figures. The goals of time series analysis are to describe the process generating the data, and to forecast future values.

Probability is the branch of mathematics that studies the possible outcomes of given events together with the outcomes' relative likelihoods and distributions. In common usage, the word "probability" is used to mean the chance that a particular event (or set of events) will occur expressed on a linear scale from 0 (impossibility) to 1 (certainty), also expressed as a percentage between 0 and 100%.

@mjb Most of the confusion over this question (and Miku's answer) was due to the fact that Miku revised his answer at some point after several comments were posted describing how Miku's answer involved calling the bash built-in true.Turns out Miku's original answer really did call the true built-in, but the revised answer did not. This caused said comments to appear to be wrong about how Miku ...
