Answer: E. When a car skids to a stop, the work done by friction upon the car is equal to the change in kinetic energy of the car. Work is directly proportional to the displacement of the car (skidding distance) and the kinetic energy is directly related to the square of the speed ( $KE = 0.5 \cdot m \cdot v^2$ ). For this reason, the skidding distance is directly proportional to the square of the speed.
