Physics Series And Parallel Circuits

A short comparison and contrast between series and parallel circuits was made in an earlier section of Lesson 4. In that section, it was emphasized that the act of adding more resistors to a parallel circuit results in the rather unexpected result of having less overall resistance.

Parallel Circuits

The current is the same through all points in series circuit. The current through each resistor in a series circuit is the same as the current through all the resistors that are in series with it. In the above figure three resistors are connected in series to a DC voltage source. At any point in this circuit, the current into that point must equal ...

Circuits with series and parallel components. Many circuits have a combination of series and parallel resistors. Generally, the total resistance in a circuit like this is found by reducing the different series and parallel combinations step-by-step to end up with a single equivalent resistance for the circuit.

Most circuits have more than one component, called a resistor that limits the flow of charge in the

circuit. A measure of this limit on charge flow is called resistance. The simplest combinations of resistors are the series and parallel connections illustrated in . The total resistance of a combination of resistors depends on both their individual values and how they are connected.

A circuit breaker in series before the parallel branches can prevent overloads by automatically opening the circuit. A 15 A circuit operating at 120 V consumes 1,800 W of total power. $P = VI = (120 \text{ V})(15 \text{ A}) = 1,800 \text{ W}$. Total power in a parallel circuit is the sum of the power consumed on the individual branches.

Resistors in Circuits - Practice - The Physics Hypertextbook

When resistors are used in electronic circuits they can be used in different configurations. You can calculate the resistance for the circuit, or a portion of the circuit, by determining which resistors are in series and which are in parallel. We'll describe how to do this below. Note that the total ...
