Factoring Special Cases The area of a square is given by $A = s^2$, where s is a side length. When the side length is a binomial, the area can be written as a perfect-square trinomial. If you are given the area of such a square, you can use factoring to write an expression for a side length. Problem A mosaic is made of small square tiles called ...

In this section we used factoring with special cases, and factoring by grouping to factor expressions with negative and fractional exponents. We also returned to factoring polynomials and used the substitution method to factor a 4th degree polynomial. The last topic we covered was what it means to factor completely.
