How Digital Cameras Work. High-end consumer cameras can capture over 12 million pixels. Some professional cameras support over 16 million pixels, or 20 million pixels for large-format cameras. For comparison, Hewlett Packard estimates that the quality of 35mm film is about 20 million pixels [ref]. Next, we'll look at how the camera adds color to these images.

Digital Camera Resolution | HowStuffWorks

However a camera that is rated at either 480TVL or 600TVL is considered High Resolution because the TVL is higher than 420. It is highly recommended that high resolution cameras only be used with DVR units that are capable of recording in HD1 & D1 resolution.

The triple camera system at the back comprises a 48MP sensor with an f/1.75 lens, a 12MP with an f/2.2 telephoto lens, and a 16MP sensor with an f/2.2 ultra-wide-angle (UWA) lens.

Xiaomi Mi 9 review: Fast processor, high-resolution camera ...

Resolution in various media. The actual resolution of 35 mm camera original negatives is the subject of much debate. Measured resolutions of negative film have ranged from 25-200 lp/mm, which equates to a range of 325 lines for 2-perf, to (theoretically) over 2300 lines for 4-perf shot on T-Max 100.

Seiler High Resolution CCD Color Camera - New York ...

The high resolution of this camera was a drawback for me initially. But it had very responsive AF. Also, super-crisp images because of the improved sensor and due to the lack of the anti-aliasing filter. Ergonomics. (I have big hands.) But I didn't anticipate that I would love the D810 as much as I do.
