PC input. output resolution is different from supported input resolution you need to check in the manual which resolutions are supported. the 1366x768 is the screen output or what it scales the supported resolutions to for the screen output. as eg: 480i low resolution gets scaled (to the best of it's ability) to the output resolution 1366x768.

### **I can't get the PC input resolution change screen to come up.**

Considerations. In the case of television inputs, many manufacturers will take the input and zoom it out to " overscan " the display by as much as 5% so input resolution is not necessarily display resolution. Graphics wise, the input rate of resolution only changes frame rate by a little bit (e.g. 1080p - 720p = 5f).

### **Display resolution - Wikipedia**

To resolve an input signal out of range error, follow the steps below. Reboot the computer into Safe Mode. Once in Safe Mode, decrease your video card resolution to the native resolution of your monitor. If you've changed the monitor resolution, reboot the computer to see if this resolves the issue.

### **Input signal out of range error - Computer Hope**

DVI-I input resolution. A screen refresh rate of 30 Hz is also supported for 1080p. The resolutions are sent natively to the far end for the primary or secondary video streams. The resolutions might not match exactly because of H.264 or H.263 protocol resolution constraints. Available bandwidth on the call may also affect the actual resolution.

### **DVI-I input resolution - Lifesize**

Go to the Settings tab and use the slider to drop your resolution a notch or two. Reboot and let Windows try to go into Normal mode. If this still doesn't work, go back into Safe Mode and get to the Settings tab of Display Properties. Click the Advanced button, go to the Monitor tab, and check your refresh rate.
