Graphical Approach to Limits. Example 3: The graph below shows that as x approaches 1 from the left, $y = f(x)$ approaches 2 and this can be written as $\lim_{x \rightarrow 1^-} f(x) = 2$. As x approaches 1 from the right, $y = f(x)$ approaches 4 and this can be written as $\lim_{x \rightarrow 1^+} f(x) = 4$. Note that the left and right hand limits and $f(1) = 3$ are all different.

Limits: A Graphical Approach - Concept. In the graphical approach, we analyze the graph of the function to determine the points that each of the one-sided limits approach. I want to talk about one sided limits, here's a function g of x equals and it's piece y is defined $x+8$ for x less than -4 and x squared -1 for x greater than or equal to -4 .

The graph is approaching the y value 2 as x gets close to 1. We could also see this from the chart of values. You will notice that the $f(x)$ values are getting close to 2 as x is getting closer to 1. . We read this as “the limit as x approaches 1 of $f(x)$ is 2”. There are also different ways of finding a limit.

Section 3.2: Finding Limits Graphically and Numerically

In this section, we will examine numerical and graphical approaches to identifying limits. Understanding Limit Notation. We have seen how a sequence can have a limit, a value that the sequence of terms moves toward as the number of terms increases. 1, 1 2 , 1 4 , 1 8 ... gets closer and closer to 0.

Worksheet # 4: Basic Limit Laws 1. Given $\lim_{x \rightarrow 2} f(x) = 5$ and $\lim_{x \rightarrow 2} g(x) = 2$, use limit laws to compute the following limits or explain why we cannot find the limit. Note when working through a limit problem that your answers should be a chain of true equalities. Make sure to keep the limit operator until the very last step.
