Resolution of forces. The actual pull on the barge is represented to scale by the line OF. If a righted triangle OAF is constructed on OF as hypotenuse and with its longer side ected along the centre line of the barge, then we have a vector diagram showing at the pull OF is equivalent to two components OA and AF.

I have been thinking about the logic of resolution of a main force into its component forces. Up to my stage i have just come across with the 2-dimension force which take x-axis and y-axis as their basis. So if they take y and x axis as the basis for the components of a single force, supposedly a ...
