Introduction to Gene Cloning and Analysis. Print. Overview ... The traditional technique for gene cloning involves the transfer of a DNA fragment of interest from one organism to a self-replicating genetic element, such as a bacterial plasmid. This technique is commonly used today for isolating long or unstudied genes and protein expression.

The foregoing descriptions are generic approaches to creating recombinant DNA. However, a geneticist is interested in isolating and characterizing some particular gene of interest, so the procedures must be tailored to isolate a specific recombinant DNA clone that will contain that particular gene. The details of the process differ from organism to organism and from gene to gene.
