3. Predator population increases 4. More predators preyed on the preys 5. Prey population decreases 6. Less food for the predators 7. Predators die of starvation and do not reach reproduction age. 8.

Predator and prey relationships - answers.com

will die. As a result, the predator population size and the population size of its prey are linked. The sizes of a predator population and a prey population often cycle over several generations (see the figure below, "A stable predator-prey population size relationship"), and this cyclic pattern is often described as a predator-prey population size relationship.

- Lotka-Volterra model of predator-prey interactions: • Generates regular oscillations of prey and predator population - as observed in nature! • But, results in "neutral stability" - very fragile stability that doesn't explain the factors that stabilize or destabilize population dynamics of predator-prey interactions

Predator-Prey Relationships Flashcards | Quizlet

In this kit, students use direct observation and modeling to examine the relationship between predator and prey in 2 sets of organisms. First, students examine the relationship between Daphnia and Hydra and between Stentor and Chilomonas .

Carolina EcoKits®: Predator-Prey Relationships (with ...

Prey: Prey population will grow exponentially (positive part of the equation) until a predator slows the growth rate (the second part is the ones that get eaten) Predator: the first term considers how nutritious the prey items are (how many it takes to make a new predator) and then you minus predator deaths with the second term

Predator-Prey Relationships Flashcards | Quizlet

Predator-Prey Interactions: Bean Simulation Introduction Interactions between predators and their prey are important in 1) determining the populations of both predators and prey, and 2) determining and maintaining the structure of a community. Many factors enter into the ultimate outcome of predator-prey interactions. A predator must
