Gas Law Simulator - Chemistry 301

Pump gas molecules to a box and see what happens as you change the volume, add or remove heat, change gravity, and more. Measure the temperature and pressure, and discover how the properties of the gas vary in relation to each other.

Investigate the properties of an ideal gas by performing experiments in which the temperature is held constant (Boyle's Law), and others in which the pressure remains fixed (Charles' Law). The pressure is controlled through the placement of masses on the lid of the container, and temperature is controlled with an adjustable heat source.

Boyle's Law and Charles' Law Gizmo : Lesson Info ...

In this simulation, students will investigate three of the fundamental gas laws, including Boyle's Law, Charles' Law and Gay-Lussac's Law. Students will have the opportunity to visually examine the effect of changing the associated variables of pressure, volume, or temperature in each situation.

Welcome to the Animated Gas Lab! Gases have various properties which we can observe with our senses, including the gas pressure, temperature, mass, and the volume which contains the gas. Careful, scientific observation has determined that these variables are related to one another and the values of these properties determine the state of the gas.

Best Answer: You need to look at the equation $PV=nRT$ for all of the questions 1- How does volume change relative to temperature at constant pressure and number of gas particles? Since P and n are constant we can kindof ignore them in the equation.. we're left with $V=T$ and since they're on opposite sides of the "=" it means they're directly proportional to one another. This means as volume goes up
