Physics Rotational Motion Problems With

Until this chapter, we have focused almost entirely on translational motion, the motion of bodies moving through space. But there is a second kind of motion, called rotational motion, which deals with the rotation of a body about its center of mass. The movement of any object can be described through the combination of translational motion of the object's center of mass and its rotational ...

Each interactive concept-builder presents learners with carefully crafted questions that target various aspects of a discrete concept. There are typically multiple levels of difficulty and an effort to track learner progress at each level. Question-specific help is provided for the struggling learner; such help consists of short explanations of how to approach the situation.

Concept Builders for Physics

A wave is a disturbance that propagates. Types of waves are defined and examples are offered. Parts and characteristics of periodic waves are described.

The load and effort usually differ in magnitude and direction as well as location. In the ideal world, mechanical energy is never lost to other forms and work in equals work out. (Oh happy day!) In the real world, however, mechanical energy is always lost, so work in is strictly greater than work out.

Then, we must also place it in a state of rotational equilibrium where the sum of all of the torques equals zero. For horizontal beams in the plane of the page, the torques will either result in a clockwise (cw) rotation or a counterclockwise (ccw) rotation.
