How to Find the General Solution of Trigonometric Equations?

General Solutions of a Trig Equation. From the following diagram we see that $\sin(\pi - \theta) = \sin \theta$ and $\cos(-\theta) = \cos \theta$. We use this to find the solutions of some trig equations. Solve $\sin(x) = y$ for x . Case 1: $-1 \leq y \leq 1$, that is, the value of y is between -1 and 1, so there is a solution. The set of all solutions to $\sin(x) = y$ is.

Solving Trigonometric Equations – General Solutions Since trig functions go on and on in both directions of the x -axis, we'll also have to know how to solve trig equations over the set of real numbers ; this is called finding the general solutions for these equations.

Solving Trigonometric Equations - She Loves Math

Trigonometric identities are true for all replacement values for the variables for which both sides of the equation are defined. Conditional trigonometric equations are true for only some replacement values. Solutions in a specific interval, such as $0 \leq x \leq 2\pi$, are usually called primary solutions. A general solution is a formula that names all possible solutions.
