AS Phys 1: Worksheet -Introduction to the Photoelectric Effect

This is a homework activity designed to help students understand how the photoelectric effect experiment works and why a photon model of light is necessary to explain the results. It was developed to be used in a sophomore level modern physics class, after lecture instruction on the photoelectric effect.

Understanding the Photoelectric Effect - PhET Contribution

An excellent computer simulation enabling students to visualize many aspects of the photoelectric effect experiment. By working with this simulation, by working through the interactive presentation, and working the problems on the student activity sheet students have the opportunity to gain a better conceptual understanding of the photoelectric effect.

Photoelectric Effect Answer Key

This Explain activity asks students to represent the photoelectric effect in a poster form and to make a physical or pictorial representation of how an imaging method (that uses EM radiation) works. Students will first receive instruction as to what the photoelectric effect is, and will then use this to create their poster.

I am really confused with the photoelectric effect... If the threshold frequency is the minimum amount of frequency that can cause a photoelectric emission, is this an emission of a photon or electron or photoelectron, or are they the same thing? What is the difference between when an electron exits and de-exites producing a photon and when the...

This is a virtual lab activity on the photoelectric effect based on a Java applet simulation of the experiment. In this activity, students measure the relationship between kinetic energy of photoelectrons and the frequency of the incident light.

Virtual Photoelectric Lab - Examples

A sodium photoelectric surface with work function 2.3 eV is illuminated by electromagnetic radiation and emits electrons. The electrons travel toward a negatively charged cathode and complete the circuit shown above.

Photoelectric Effect. Shoot a beam of light at a metal plate in a virtual lab and observe the effect on surface electrons. The type of metal as well as the wavelength and intensity of the light can be adjusted. An electric field can be created to resist the electrons and measure their initial energies.
