Different gases diffuse at different rates, depending on their molar masses. You can compare the rates at which two gases diffuse using Graham's law. Graham's law also applies to effusion, the process in which gas molecules flow through a small hole in a container. Diffusion is the movement of a substance from an area of [...]

How to Solve Diffusion and Effusion Problems Using Graham ...

Graham's law may only be used to compare the rate of diffusion or effusion of gases at a constant temperature. The law breaks down, like other gas laws, when the concentration of gases becomes very high. The gas laws were written for ideal gases, which are at low temperatures and pressures.
