The message in your DNA of who you are and how your body works is carried out by cells through gene expression. In most cases this means synthesizing a specific protein to do a specific job. First, mRNA is transcribed from the DNA code. Then, the mRNA sequence is translated into a polypeptide sequence. Model 1 - Codons.

b-globin gene Expression of the b-globin gene is a typical process. This gene contains two introns and three exons. Interestingly, the codon of the 30th amino acid, AGG, is separated by an intron. As a result, the first two nucleotides AG are in one exon and the third nucleotide G is in another exon.

' 16. Explain how the term "translation" applies to the synthesis of proteins from DNA instructions. 1 The language of DNA, in the form of nitrogen bases read in sets of three called codons, is being translated into the language of proteins, i. e., amino acids. Control of Gene Expression in Prokaryotes POGIL Notes. In a repressible operon, a corepressor binds to the repressor protein so that it can bind to the operator and inhibit transcription when the protein is in excess (STOP) example: trp operon. In an inducible operon, an inducer molecule binds to the repressor protein so...

factors could influence gene expression on other copies of the gene located on separate pieces of DNA (extra chromosomal) in the cell. The model proposed contains lac I, a promoter region, an operator region, the transcription unit which contains lac Z, lac Y and lac A. The gene product of lac I is a protein, known as the lac repressor. This

λ Gene Expression The patterns of gene expression during λ growth are summarized in the previous slide. The first two stages of development - very early and early - occur before the decision to lyse or lysogenize is made. We can summarize the pattern of gene expression at each stage as follows: Very early Only genes N and cro are on. Early

“Gene Regulation in Prokaryotes” - Carroll lab

Now we turn to mechanisms that regulate expression—that is, mechanisms that increase or decrease expression of a given gene as the requirement for its product varies. There are various stages at which expression of a gene can be regulated. The most common is transcription initiation, and the bulk of this chapter focuses on the
