I've researched the DPI/PPI issue, and get the difference between the two. I understand that if you start out with an portrait image anywhere between 2000-3000pixels in width it should look great printed to an 8x10in at 200-300dpi. My question is - what if an image was cropped and got to be only 1000 pixels wide and it needs to be printed to an 8x10in size paper?
