Mendeleev's Proposal Mendeleev's strategy for organizing the elements was modeled on the card game. Mendeleev made a "deck of cards" of the elements. On each card, he listed an element's name, mass, and properties. He paid special attention to how each element behaved in reactions with oxygen and hydrogen.

To begin to answer these questions, chemists needed to find a logical way to organize the elements. Chemists used the properties of elements to sort them into groups. In 1829, a German chemist, J. W. Dobereiner (1780–1849), published a classification system. In his system, elements were grouped into triads.

### **6.1 Organizing the Elements 6**

key was to break the elements into rows, as shown in Figure 3. Mendeleev arranged the elements into rows in order of increasing mass so that elements with similar properties were in the same column. The final arrangement was similar to a winning arrangement in solitaire, except that the columns were organized by properties instead of suits.
