John Hattie developed a way of synthesizing various influences in different meta-analyses according to their effect size (Cohen's d). In his ground-breaking study "Visible Learning" he ranked 138 influences that are related to learning outcomes from very positive effects to very negative effects. Hattie found that the average effect size of all the interventions he studied was 0.40.

Obsolete metric prefixes. Some of the prefixes formerly used in the metric system have fallen into disuse and were not adopted into the SI. The decimal prefix myria-(sometimes also written as myrio-) (ten thousand) as well as the binary prefixes double-and demi-, denoting a factor of 2 and 1 / 2 (), respectively, were parts of the original metric system adopted by France in 1795.
