This is the foremost reason that some pile design regulations , require that the pile design calculations must be related to results from pile load tests. Furthermore, a detailed back-analysis of a pile test can provide appropriate design values for the aforementioned parameters, whereas, by back-figuring from the results of pile load tests ...

- The maximum allowable design stress during the service life.
- The maximum allowable driving stresses.
- Additional material stress limits, beyond the design and driving stress limits, may apply to prevent buckling of piles when a portion of the pile is in air, water, or soil not capable of adequate lateral support.
