In a polymer solution, a theta solvent (or θ solvent) is a solvent in which polymer coils act like ideal chains, assuming exactly their random walk coil dimensions. Therefore, the Mark-Houwink equation exponent is $1/2$ in a theta solvent. Thermodynamically, the excess chemical potential of mixing between a polymer and a theta solvent is zero.

Die swell, also known as extrudate swell or Barus effect, is a common phenomenon in polymer processing. Die swell occurs in instances of polymer extrusion, in which a stream of polymeric material is forced through a die, a specialized tool in manufacturing to shape or cut polymeric materials. Die swell is an instance where a polymer stream is compressed by entrance into a die, and is followed ...

This relationship was derived to predict copolymer T_g s from homopolymer T_g s of similar molecular weights by applying polymer free volume theory and two important assumptions: (1) ideal volume additivity of both components at T_g and (2) no specific interactions between the two components (ideal mixing behavior). Hence this method applies to binary mixtures in which the components are fully ...

La masa molecular (masa molecular relativa o peso fórmula), cuyo símbolo es M_f , es una magnitud que indica cuántas veces la masa de una molécula de una sustancia es mayor que la unidad de masa atómica. Su valor numérico coincide con el de la masa molar, pero habitualmente expresado en unidades de masa atómica (su unidad en el SI es el kilogramo), en lugar de gramos/mol.
