The terminology applied to the plant forms of annuals and perennials is sometimes different from that applied to trees and shrubs... The plant form (growth habit) for the ground cover, creeping phlox, for example, is often termed "cascading." The equivalent term for a shrub that functions as a ground cover would be "broadly spreading" (for instance, for creeping juniper shrubs).

Leaf, in botany, any usually flattened green outgrowth from the stem of a vascular plant. As the primary sites of photosynthesis, leaves manufacture food for plants, which in turn ultimately nourish and sustain all land animals. Botanically, leaves are an integral part of the stem system, and they are initiated in the apical bud (growing tip of a stem) along with the tissues of the stem itself.
