Traits studied were eye color and presence or absence of wings. The wild-type phenotypes were winged flies and red eyes, while the mutant phenotypes were apterous (wingless) and sepia (brown) eyes. To build an adequate profile of inheritance patterns both monohybrid and dihybrid crosses were performed.

Lethal Inheritance Patterns. A large proportion of genes in an individual's genome are essential for survival. Occasionally, a nonfunctional allele for an essential gene can arise by mutation and be transmitted in a population as long as individuals with this allele also have a wild-type, functional copy.

Using the Solving Punnett Squares file as a class visual and the Monohybrid Cross Worksheet, I explicitly teach the seven-step process by which a Punnett Square problem can be solved. As a class I model the process of solving problems #16 a, b as I randomly solicit student input during the problem-solving process.
