Photo Developing Solution

Photographic processing or development is the chemical means by which photographic film or paper is treated after photographic exposure to produce a negative or positive image. Photographic processing transforms the latent image into a visible image, makes this permanent and renders it insensitive to light.

Photographic processing - Wikipedia

Film Developing Process. ... Always remember that soaking the film in the developing solution is a crucial stage, and the timing for which the film has to be soaked in the solution has to be accurately followed. Step Three. Use the stop bath solution (acetic acid) as a stop bath. Fill the tank with the stop bath solution, shake it, and pour out ...

Step-by-step Guide to Photographic Processing

In the processing of photographic films, plates or papers, the photographic developer (or just developer) is one or more chemicals that convert the latent image to a visible image. Developing agents achieve this conversion by reducing the silver halides, which are pale-colored, into silver metal, which is black (when a fine particle).

Photographic developer - Wikipedia

Not many people use film cameras anymore, so it can be hard to find the materials to develop your own photos at home since most local camera stores are closing. But it's actually relatively easy to make homemade developer, and you can make it with a few relatively common ingredients.
