Pedigrees Practice In humans, albinism is a recessive trait. The disorder causes a lack of pigment in the skin and hair, making an albino appear very pale with white hair and pale blue eyes. This disorder also occurs in animals, a common albino found in a laboratory is the white rat. The pedigrees below trace the

Answers to the Pedigree Practice Problems

Pedigree Analysis: Carrier Probabilities . In these problems you examine family pedigrees displaying a rare disease trait and calculate the probability that various unaffected family members are "carriers," (that is, they carry a single disease allele). This kind of analysis is important in genetic counseling.

Pedigree Analysis: Carrier Probabilities

Biology Pedigree Problems (20 points total) 1. (5 points) The pedigree below shows the incidence of sickle cell disease in a family. Use "A" to represent the dominant allele for normal blood and "a" to represent the recessive allele for sickle cells and fill in the genotypes for as many of the people in this family as you can. 2.
