A physical property is an aspect of matter that can be observed or measured without changing its chemical composition. Examples of physical properties include color, molecular weight and volume. A chemical property may only be observed by changing the chemical identity of a substance.

### **Difference Between Physical and Chemical Properties**

Physical properties may be classified as either intensive or extensive. Intensive physical properties do not depend on the sample's size or mass. Examples of intensive properties include boiling point, state of matter, and density. Extensive physical properties depend on the amount of matter in the sample.

### **Physical Properties of Matter - ThoughtCo**

**Physical Properties** A physical property is a property that can be determined without changing the nature of the substance. Consider table sugar, or sucrose. You can see that it is a white solid at room temperature, so color and state are physical properties. It also has a gritty texture.

A substance always has chemical properties. A piece of wood is flammable even when it is not burning. Iron can form rust even though it has not rusted. **CHARACTERISTIC PROPERTIES** The properties that are most useful to identify a sub-stance are called characteristic properties. These prop-erties are constant. This means that they do not change.
