Partial Differential Equations, Spring 2015. The proof in Petrovsky assumes that the solution u (x,t) is bounded while the proof in John allows for the solution to grow at infinity as long as for any T there is a constant c so that |u (x,t)|< e (c|x|2) for all 0 ≤ t ≤ T. Note that if u (x,t) is allowed to grow too quickly at infinity,...

analysis of the solutions of the equations. One of the most important techniques is the method of separation of variables. Many textbooks heavily emphasize this technique to the point of excluding other points of view. The problem with that approach is that only certain kinds of partial differential equations can be solved by it, whereas others ...
