Locus problems in geometry sometimes involve two or more conditions, as the following examples illustrate. Example 5: If A and B are two points that are 2 units apart, what is the locus of points that are 1 unit from A and 2 units from B? Solution: The locus of points that are 1 unit from A is the circle with center A and radius 1.

--> the locus will take the form y = m*x + (b1+b2)/2 (call this line P) If, however, b1 = b2, then choose a real number c. Since the lines V and W are the same in this case, than the locus of all points equidistant from V and W is simply going to be of the form y = m*x+c where c is fixed for any particular distance.
