Finite element method. Typical problem areas of interest include structural analysis, heat transfer, fluid flow, mass transport, and electromagnetic potential. The analytical solution of these problems generally require the solution to boundary value problems for partial differential equations.

Finite element method - Wikipedia
This applies to space frame analyses as well as solid finite element modelling. Start off with a hand calculation and work your way towards more complex models. As soon as you get results, check

your loads and make sure they match the reactions. If your results don't seem to make sense, check your units everywhere.
